Motovolt Mobility to Double Retail Network to 200 by March 2026: Revolutionizing Kolkata's Last-Mile Delivery

The urban logistics scenario in India is set to witness a huge green revolution. Kolkata-based Motovolt Mobility has announced an aggressive expansion plan to double its retail presence, targeting 200 retail outlets by March 2026. This is a strategic step to cater to the rapidly growing demand for Electric Vehicles (EVs) in the last-mile delivery and micro-mobility segments.

For riders who are looking for budget-friendly options to enter this market, including those searching for a second-hand Scooty in Kolkata, this expansion is an indication of a stronger infrastructure and support system for the gig economy.

1. Scaling for the Gig Economy

As of early 2026, the gig economy is expected to expand from $5 billion to almost $100 billion. This is accompanied by the need for an additional 7 million riders in the next five years. Motovolt is launching its flagship product, the M7 multi-utility scooter, as the "SUV of two-wheelers," with the ability to support a load of up to 180 kg and a range of 166 km, ideal for heavy-demand delivery riders.

Network Growth: Scaling from 100 to 200 touchpoints across Tier 1 and Tier 2 cities.

Format: The new outlets will function as experience centers, service hubs, and dealer-led showrooms.

Technology: Integration of proprietary German-engineered components, including motor controllers and Battery Management Systems (BMS).

Decoupling Costs: Battery-as-a-Service (BaaS)

One of the major challenges that delivery partners have faced is the high initial cost of EVs. Motovolt is addressing this challenge through Battery-as-a-Service (BaaS) agreements with firms such as Yuma Energy and Indofast Energy.

Decoupling the battery cost allows riders to buy the vehicle at a much lower price and then pay for the battery usage as they consume it. This makes a new Motovolt vehicle a very attractive option when compared to someone searching for a second-hand Scooty for sale in Kolkata, as the cost of running is much lower compared to petrol vehicles.

Establishing a Strong Secondary Market through Six Buy and Sell

With Motovolt expanding to 200 outlets, the presence of new vehicles on the roads will automatically trigger a better-organized secondary market. The need for the likes of Six Buy and Sell will become imperative in this process.

Why Choose Six Buy and Sell?

Certified Listings: Whether it is the first-generation EV or a certified pre-owned Scooty in Kolkata, it is important to be transparent.

Inspection Standards: Each vehicle is subjected to a 50+ point technical inspection, thereby filling the "trust gap" associated with the purchase of a second-hand EV.

Accessibility: For those who are not yet ready to spend the amount associated with the purchase of a brand-new M7, Six Buy and Sell provides a carefully curated list of pre-owned electric two-wheelers.

Conclusion: The Future is Verified and Electric

Motovolt’s expansion is not merely about increasing the number of scooters sold; it is about creating a sustainable ecosystem. By March 2026, with the help of 200 retail outlets,

sophisticated battery swapping technology, and trusted resale platforms such as Six Buy and Sell, electric mobility will become the norm for every Kolkatan delivery partner.
